## *VIRTUOSITY*

Definition by “la Maison De Dietrich”:

*Transform the raw material to bring  
sophistication and emotion through a great  
technical mastery and an ultimate workmanship  
and know-how.*

*Express the essence of our talent, audacity, and  
mastering of cooking to reinvent a collection  
of nobility and emotion, and exceptional  
culinary results.*

**De Dietrich**

DE DIETRICH

1

# LA MAISON DE DIETRICH

La Maison De Dietrich is built upon a dynasty of visionaries.

It all started in Jaegerthal, a valley to the north of Strasbourg, with a tremendous gamble.

In 1684, Johann Dietrich decided to invest in the forging industry. He stamped all his creations with a hunting horn, and in doing so created the first logo in industrial history.

La Maison De Dietrich entered a new era under the leadership of Jean de Dietrich, the successor who was given a peerage by Louis XV, and subsequently with Amélie de Dietrich, who was the first woman in industry to bring the importance of design and appearance into industrial production.

With this strong momentum behind it, the brand continues to develop its approach towards innovation, groundbreaking ideas, and the French art of living.

# OUR SAVOIR-FAIRE

Few French manufactures can boast over 300 years of history as La Maison De Dietrich can. Since its creation at the end of the 17<sup>th</sup> century, the company has consistently presented new creations, innovations and unique technology, such as the first domestic cooker, the pyrolytic oven, and the saturated steam oven.

In 1990, De Dietrich revolutionised induction hobs.

In 2010 it created Piano, the first fully zoneless induction hob, and in 2013 it launched the HoriZone Chef induction hob, which counts four different cooking modes among its innovative new features.

Expertise is passed on from generation to generation, allowing us to offer an unsurpassed level of excellence. Inspired by its heritage and inherited knowledge, the new De Dietrich design is just as much a signature look as it is the personification of the French art of living.

# OUR MANUFACTURES

De Dietrich fosters its own love of excellence across all its manufactures in France, creating the most wonderful harmonies. For over 300 years, exceptional execution has meant that its virtuosity and capacity for orchestration have set De Dietrich apart.

La Maison De Dietrich continues this quest for perfection by way of in-depth understanding, an exceptional level of expertise and meticulous actions.

Just as musicians tirelessly repeat their scales, each of our engineers makes a point of ensuring that each model is perfectly crafted.

From transforming iron to developing connectivity, De Dietrich skilfully plays its part in designing and manufacturing perfectly-finished models.

5

BVCert. 6011825

The brand is proud to be able to attach a 'Origine France Garantie' label to its products. This label was created out of a French Ministry of Industry initiative in 2011, and represents transparency and accuracy of information regarding the origin and manufacturing procedures for the majority of De Dietrich products. It is a point of reference for consumers with exacting standards who are looking for outstanding, prestigious, top-quality products.

## A PHILOSOPHY OF EXCELLENCE

## THE FRENCH ART OF LIVING

De Dietrich provides a physical representation of the *Art de vivre*, or the French art of living, and is part of the French culinary heritage.

Driven by a never-ending quest for perfection and creativity, the brand focuses on elevating raw, high-quality materials and evoking pure emotion. The gamble was successful for this virtuoso, who has managed to combine pure design, innovation, and top-quality material.

An unparalleled expertise which immediately awakens desire.

Its long-lasting partnership with the Michelin-starred chef Pierre Gagnaire also sums it up perfectly.

"De Dietrich and I share the same wish: to make people excited by cooking. From the most simple actions to the most sophisticated techniques, everyone can let their creativity run wild with this high-performing equipment."

# SUPPORTING CULINARY EXCELLENCE WITH TECHNOLOGICAL VIRTUOSITY

## 60CM OVENS

The perfection demanded by De Dietrich for this new Fascination Collection means that nothing is left to chance. With a delicate balance of expertise and passion, precision and boldness, a harmonious combination of premium materials such as glass, stainless steel and copper, technological performance and unique processes, the new De Dietrich “Fascination” ovens, highly sophisticated in both their design and attention to detail, represent a brand which is keen to offer its clients a unique way of life.

### *Their place in the world of design.*

De Dietrich reinvents timeless materials such as iron and copper, as symbols of its heritage. The new oven design pushes the limits in terms of finish, quality, aesthetics and functionality.

Its features are distinctive, such as sturdy handles mounted on brushed stainless steel or cast iron front panels with the company name elegantly depicted in the logo, dials set in stainless steel and copper showing intuitive controls, and doors in sophisticated Absolute black glass, Iron grey or Pure white, on which the De Dietrich emblem is proudly displayed.

The new ‘Fascination’ collection has been recognised by the Red Dot Award, a prestigious international design and innovation competition. It won the **Red Dot Design Award** in 2017, in recognition of the line's design and concept, and the innovative technology used. It was also awarded the JANUS DE L'INDUSTRIE 2017 for design and innovation. Yet again, De Dietrich impresses with state of the art products.

### *Supporting culinary excellence with technological virtuosity.*

**The “Chef” Mode: up to 15 dishes. Exclusive to De Dietrich. Fully automatic cooking with the utmost precision.**

De Dietrich has integrated an unrivalled functionality into its ovens' programming options: the “Chef” Mode. A product of the very latest technology, this mode allows you to prepare between 9 and 15 of your most frequently-cooked meals automatically. You simply choose the dish on your menu and put it in at the height, recommended by the oven. This exclusive technology is patented by De Dietrich and adjusts all settings automatically: the cooking mode, the ideal temperature and even the cooking time. A sensor constantly analyses the dish's humidity level so that cooking time can be adjusted down to the minute.

OVENS

# *The art of successfully preparing all meals as they should be prepared.*

**Multifunction Plus:**  
**Combined Heat and Fan Cooking functions, exclusive to De Dietrich.**  
 Among the functions offered by the Multifunction Plus, a cooking modes stands out: Combined.

Top and bottom heat elements are paired with an element surrounding the fan which ensures perfectly even distribution, the **Combined Heat** function has been specifically designed for moist-heat cooking methods, as used for tarts, quiches or pizzas for example. This technique also produces energy savings. The temperature rises very quickly, thus eliminating the pre-heating phase.

**French Patisserie mode:**  
**14 recipes available.**  
**Excel at an art which is envied worldwide.**  
 Macarons, cannelés, chocolate fondants... if you consider French patisserie to be a key element of culinary art, you no longer need to feel daunted by it. From now on you can count on this special menu, exclusive to De Dietrich, to help you skilfully and successfully produce these patisserie classics. Choose from the 14 recipes available for automatic cooking and let the compliments roll in.

**Low-temperature cooking: 10 dishes. The utmost respect for culinary tradition.**  
 These De Dietrich ovens are at the forefront of technology, and are equipped with all the tools necessary for creating culinary masterpieces. Used by top chefs, this gentle, even and consistent method of cooking at temperatures lower than 100°C is perfect for delivering particularly tender and flavoursome meat. It is extremely easy to access this programme. All you have to do is choose your dish: pink or well-done lamb, roast veal, rare or well-done roast beef, roast pork, chicken, both small and large whole fish, yoghurt, etc. and the oven will then automatically cook the product as required.

**The Culinary Guide:**  
**up to 50 recipes available.**  
**Guaranteed high-quality cooking.**  
 After choosing a preprogrammed recipe and entering the weight of the dish, the oven automatically determines the appropriate cooking mode, as well as the ideal temperature and the cooking time required down to the minute. It is a real expert when it comes to helping you with your culinary creations.

**“Variable Grill” Function:**  
**up to 4 power settings.**  
 Certain recipes, all of which initially seem simple - such as meringues - actually require a great deal of hands - on work to achieve perfection. By modulating the heat of the grill between 1 and 4, this function helps you to achieve culinary feats on a daily basis.

**Drying Function.**  
**Enhancing the flavours of all your meals.**  
 De Dietrich has equipped its new ovens with a function that nowadays it would be difficult to do without. This dehydration process allows you to dry a large number of different foods at a perfectly controlled temperature of between 60°C and 80°C, including aromatic herbs, fruits and vegetables. By preventing the build-up of bacteria, it allows you to preserve produce for several months and use it whenever you like; it also preserves essential elements such as vitamins and minerals.

**Sabbath Function.**  
**Inventive and functional.**  
 De Dietrich is breaking new ground in offering three new ovens equipped with a special Sabbath function. This programmable mode allows the oven to function completely independently for 25 hours, or up to 75 hours if required. A flow of electricity maintains a constant temperature of 90°C in the cavity, so that dishes may be cooked or kept warm without needing to use a thermostat. The interior light stays on all the time, even when the door is closed.

# *Four new interfaces for intuitive access to all functions.*

De Dietrich has always based its oven designs on one intangible value: precision. Here, beneath a simply beautiful design, it is the electronics which reign supreme with four different programming modes, all controlled by a unique dial that is a rare combination of sophistication and functionality. It turns smoothly to provide an on-screen display of all functions and cooking methods available: all you then have to do is make your selection by lightly touching the centre of the controller.

**Connaisseur Screen Programmer.**  
 The interface is home to a simple and intuitive high-definition colour screen which lets you navigate through sectors and submenus: the Greengrocer, the Butcher, the Delicatessen, and so on. Each option is accompanied by a stunningly unique and lifelike illustration. Breathtaking photos are displayed on the screen when exploring the endless preset dishes and recipes in the Chef Mode, Culinary Guide, Low-temperature, French Patisserie and Drying Function menus.

**Epicurien Screen Programmer.**  
 Like the Connaisseur Programmer, it used the same access system with which you can navigate through submenus and different types of dishes using the dial provided. Each available function and recipe is depicted on screen using delicate sketches, with the detailed and accurate illustrations making contents easier to read and understand.

**Gourmet White LED Screen Programmer.**  
 After selecting a preprogrammed function or dish, a clear and crisp on-screen display recommends what shelf to place the dish in the oven and the best temperature to use, and guides you through the programmed cooking process.

**White LED Programmer.**  
 This provides a crisp display of all the main functions and cooking settings, such as recommendations regarding oven temperature or the length of resting time.

OVENS

OVENS

*A real new gem for faultlessly executing all your greatest culinary classics.*

**Optimised 73-litre volume and outstanding energy performance.** De Dietrich ovens stand out due to their large 73-litre cavity volume. This space makes it as easy as can be to prepare large or wide dishes, with six different shelf levels easily identifiable on the sides of the oven so that you can follow its recommendations and place your cooking dish at the ideal height. The carefully thought-out cavity design and the reinforced wall insulation make for a shorter pre-heating time and perfect temperature control at the lowest possible price. As demonstrated by its A+ energy label.

*Exceptionally high safety levels.*

**Cool door with 4 glass panels.** Thanks to a ventilation system that is exclusive to De Dietrich and the use of four glass panels, the oven door never gets hot enough to burn you.

**Control Lock and Auto-Stop safety features.** The first allows you to lock the control panel to avoid starting the oven accidentally; the second automatically shuts off the oven after 23 hours if someone forgets to turn it off.

**Soft Close Door: the ultimate comfort of soft closure.** This patented system, exclusive to De Dietrich, enables the oven door to gently close itself.

**Halogen lighting.** Halogen lighting provides the perfect light - natural, powerful and even. It gives excellent visibility on all levels of the cavity, even when there are several dishes being cooked at once.

**Three Pyrolytic cleaning modes: the art of preserving excellence.** In order to satisfy even the most exacting of users, our Multifunction Plus ovens are equipped with three Pyrolytic functions for made-to-measure cleaning services. The addition of a pyrolysis turbine evenly circulates air all around the cavity, guaranteeing optimal cleaning throughout. With the **Pyro-Turbo** function, the oven is out of action for 2h compared to 1h30 in **Pyro Eco** mode. The **Pyro Express** mode cleans the cavity in 59 minutes flat by using residual heat from a previous cooking process. The exclusive **Pyro-Control system** automatically sets the time required for pyrolysis between 1h30 and 2h15, depending on the level of dirtiness detected. This cleaning process combines efficiency and economy so that cleaning your oven produces consistently immaculate results.

**Drip tray and Basting racks, anti-tip racks and a telescopic rail system. A full set of equipment with a wide range of uses.** A drip tray is included in all ovens. This one has a handle at the front for ease of movement. On certain models, the drip tray is equipped with two adjustable and removable half racks, specially designed so that you can baste your dish with the cooking juices. What is more, the racks for resting your dishes on are designed so that they can be brought securely forwards up to three quarters of the way out of the oven. They are fitted with two feet and an arch at the back which prevents dishes from tipping over. Depending on the model, the rolling rail system enables you to slide racks and dishes in and out of the oven with the greatest of ease.

**Inner walls on which nothing sticks to.** A smooth, highly resistant enamel cavity is exceptionally shiny and durable, as well as being extremely easy to clean.

## 45CM OVENS

These ovens have been thoughtfully designed to fit harmoniously with another oven from the collection and present a flawless profile regardless of your chosen layout: having the panel and handle exactly in line, making both installations a height of 45cm, or using front adjustable feet for perfect alignment as part of a horizontal arrangement.

### New 100% Combi Steam oven.

This gives you the choice between Multifunction Plus, combination steam or 100% steam, with technology inspired by professional kitchens. The process does not require any special installation to take place, thanks to the water tank located on the front. There are two cooking applications offered within the Combined Steam setting: a three-setting Expert Mode and a Cooking Guide. In Expert Mode, the oven manages all selected settings electronically. With the Cooking Guide, all you have to do is make your choice and enter the weight of the dish. The oven will automatically determine and manage all settings required to successfully create a healthy and nutritional dish.

### Multifunction Plus Pyrolytic Oven.

With a 40-litre volume, this oven can do everything that traditional-sized ovens can do. Included in the ten highly distinctive functions offered by the Multifunction Plus is a "Bread" mode, enabling you to lay your table with soft, golden and crusty bread whenever you like; 15 preprogrammed recipes are also provided in the Cooking Guide so you can be sure to succeed, whatever type you are cooking.

### Microwave Ovens.

Nothing beats a microwave when it comes to defrosting things in record time, or reheating or cooking two large dishes simultaneously whilst still managing to preserve their flavour and nutritional properties. Combining a folding grill with four different power settings and Fan cooking, De Dietrich microwaves offer ten different preprogrammed dishes for an entirely automatic cooking process.

### Steam Oven.

Preserving the vitamins, minerals, flavour, consistency and colour of food, using steam has created an entirely new way of cooking. This Steam Oven allows you to use this unique, gentle, healthy and delicate cooking method, which is widely acknowledged and appreciated, with the utmost precision.

# 38CM INTEGRATED MICROWAVE

These microwaves have been thoughtfully designed so that the product does not get in the way of having daily access to a complementary “speedy” cooking method. These integrated models are provided with an integrated installation kit so that they can elegantly slot in above an oven in a standard cabinet recess.

## New interfaces mean you get the most out of your cooking.

With De Dietrich, programming is extremely easy, with instructions that are very precise and easy to read. All the available functions are immediately identifiable on the white electronic display panel. In addition to the defrost mode, six cooking settings are offered so that you can mix up your dishes and keep things interesting.

## Anti-condensation system.

Thanks to an internal airflow system, any condensation from the cooking process is avoided, ensuring perfect visibility into the oven.

## All the delights of cooking under a grill.

The quartz grill enables you to successfully cook dishes in a microwave that up to now have only been possible in a traditional oven. It rapidly gets up to temperature, and the two heat settings (high or low) are adjustable for different types of cooking, with an even distribution of heat provided.

The rack provided with the Microwave Grill is collapsible. This means you can tidy it away in a cupboard when not in use.

The pizza pan has been specially designed to suit microwave cooking methods, and produce pizza just as it should be: both crispy and melting all at once.

EXCEPTIONAL  
MODULARITY FOR  
AN INFINITE CULINARY  
EXPERIENCE

## INDUCTION HOBS

Having spent over two decades perfecting induction technology, De Dietrich is once again pushing the boundaries of zoneless cooking with horiZone, a new and unique design based on modular space. Using ground-breaking innovation to achieve outstanding functionality, De Dietrich is transforming culinary experiences into a precise and accomplished art form with the most luxurious and highly-developed induction hob collection ever designed.

### *horiZone. The ultimate accomplishment in revolutionary technology.*

A product of the combined technological expertise held by the French engineers at De Dietrich, this 40cm x 23cm modular cooking space is the most comprehensive cooking zone on the market. Wide, oval, rectangular... it can accommodate cookware of all shapes and sizes, from 23cm frying pans to 40cm oval casserole dishes. The options are endless with horiZone, where all cooking combinations are made possible.

### *horiZone Play. Exceptional modularity for an infinite culinary experience.*

Constantly breaking new ground in our quest for excellence, De Dietrich is proud to present horiZone Play. This innovative design enables you to use a single hob for multiple different cooking methods, giving you unprecedented taste sensations. Available in 90cm, 80cm and 65cm versions, as well as a 38cm domino, horiZone Play induction hobs offer total modularity for your cooking. Delivered with a cutting board made with wood from the Sologne region of France, they can also be customized with a detachable grill or plancha specially crafted to match the dimensions of the horiZone.

A grill and a plancha are available as optional accessories on horiZone Play hobs.

INDUCTION

45

## horiZone Chef Tactilium. Endless extra space and inspiration.

The new **horiZone Chef Tactilium** hob is the jewel in the horiZone range, pushing the boundaries of zoneless cooking even further. This new and unique modular design offers four distinctive cooking modes and allows for endless combinations. Offering totally zoneless, two-zone, and even three- or four-zone combinations, this hob will continue to amaze you with its capabilities.

## Cookware recognition. Quite simply revolutionary.

Inspired by the technology used on the Piano hob, the horiZone Chef Tactilium hob uses this feature to instantly sense cookware on its surface, regardless of where it is positioned. You can therefore move it at any point during the cooking process: assigned settings will automatically follow dishes from one point to another.

### ◆ In Solo mode

The cooking area transforms into one single zone. One single power and time setting is all it takes for you to cook several similar types of dishes.

### ◆ In Duo mode

The space splits into two separate zones, each measuring 40cm x 23cm. You can then programme a different heat setting and cooking time for each of the zones. Ideal for cooking one large dish on one side and using the other to simmer your accompaniments in several smaller pans\*.

### ◆ In Trio mode

The space splits into three different zones, one of which measures 40cm x 23cm. You can choose a different heat setting and cooking time for each. For example, you could sear or fry something in a large dish on the first, cook vegetables in a saucepan on the second, and keep a sauce warm on the third.

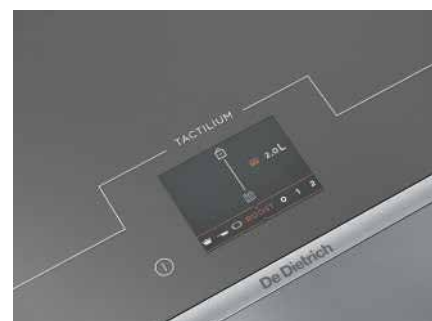

### ◆ In Quattro mode

The cooking area divides into four separate zones. You can adjust each to a different power setting and cooking time.

## The Tactilium screen. For a unique culinary experience.

The crowning glories of the Iron Grey Collection, the **horiZone Chef Tactilium** and **horiZone Play** hobs combine an elegant appearance with cutting-edge technology. They are equipped with a state-of-the-art control screen. The brightness and contrasts of the touch-sensitive interface make it easy to read the clear function descriptions that it provides. You programme your cooking processes

by choosing the cooking mode and available power settings, either through touching the screen or using the slider.

\*for pot diameters larger than 10cm

## The most wonderful culinary creations are at your command.

### An intelligent keypad.

The new De Dietrich induction hobs are highly adaptable and flexible when it comes to adjusting their power settings. Their new digital keypad allows you to adjust the power between 1 and 20, with extreme precision and optimum legibility provided by the white LED display.

De Dietrich induction technology here reaches record power levels, with between **2,400W and 3,700W delivered on traditional zones, and 3,700W and 5,000W on 28cm and horiZone zones.** These zones are offered in varying dimensions and can accommodate both round and oval dishes regardless of size, with an innate capacity for adjustment.

### Features that are consistently higher performing, for the achievement of excellence.

- ◆ **ICS:** this recommends the best-suited zone for any given pan so that you get maximum efficiency.
- ◆ **Elapsed time:** the time since the last heat adjustment was made is displayed on the keypad. This function is perfect for keeping an eye on dishes, and is essential for when you forget to set the timer.
- ◆ **Recall:** the programmed settings (for heat and time) are saved so that you can retrieve them should the cooking zone turn off unexpectedly.
- ◆ **Switch - settings tracker:** this function offers you the advantage of being able to move your pan from one zone to another and keep the same settings (cooking style and timer).

◆ **Automatic pan detection:** once it is turned on, the hob automatically recognises a pan placed on any of its zones and displays this to you on the keypad.

### When time is scarce: functionality and precision are here to help.

- ◆ **Boil function:** for pushing the physical limitations of time, with the ability to boil up to 6 litres of water in record time.
- ◆ **Four direct access controls for added efficiency:** with a simple touch on the dedicated button, De Dietrich induction hobs provide you with instant access to power settings for searing, simmering, or keeping your dishes warm.
- ◆ **Timers:** each zone is equipped with its own timer, which you can use to programme the cooking time for between 1 and 99 minutes.

## Because your safety is our priority...

To completely secure the hob whilst the zones are being cleaned, the **Clean Lock** feature allows you to temporarily block all commands for one minute. What is more, all hobs are fitted with 10 safety features which guarantees you trouble-free cooking at all times:

- ◆ **Anti-Overheating safety feature:** exclusive to De Dietrich, this limits the temperature under the zone to 300°C. Oil, for example, then stays at a constant temperature, and there is no risk of it catching fire.
- ◆ **Anti-Overspill safety feature:** if liquid spills out onto the control panel, the hob turns itself off automatically.
- ◆ **Keyboard Lock:** this function prevents anyone - particularly children - from turning the hob on accidentally.

- ◆ **Residual Heat Indicators:** after a long cooking period, the zone surface may stay hot. A light showing the letter "H" displays on the keypad while the temperature remains above 65°C.
- ◆ **Automatic-Stop System:** if it looks like you might have forgotten about a dish you are cooking, the hob will turn itself off.
- ◆ **Cookware Detection:** if no pans are placed on the induction hob, LEDs flash until it is started properly, and the system will turn itself off after one minute.
- ◆ **Small Utensils safety feature:** there is no risk of lids or small utensils placed on zones being used getting hot; the induction surface is only activated when it comes into contact with metallic surfaces over 10 cm in diameter.
- ◆ **Voltage:** the hob is able to detect low voltages.

- ◆ **Connection:** a beep is emitted and electrical circuits are protected in the event of an incorrect connection.
- ◆ **Overvoltage:** this valuable safety feature prevents damage to electrical circuits, particularly in the event of lightning.

# 90CM PIANO INDUCTION HOB

## Boundless opportunities for culinary creativity:

This unique and expansive cooking area, 2,600cm<sup>2</sup> in size and totally zoneless, allows you to have up to five dishes on the hob at the same time, whatever their shape and size, and to place them wherever you like on its surface. From now on, how you have it is up to you.

### ◆ In Solo mode

The entire cooking area is available for you to use with the same power settings across the board. This mode is perfect for cooking several of the same type of dish using one single setting.

### ◆ In Piano mode

The cooking area divides into three separate zones. You can assign a different temperature to each depending on what type of cooking process you would like to use - for example, you can keep something warm in one zone, cook something in the second, and boil in the third.

### ◆ In Expert mode

The entire cooking area is yours to do with as you wish. The hob instantly senses any cookware placed on its surface, wherever it is positioned. You can adjust the heat and the cooking time. The settings that are assigned to pots automatically follow them when you move them from one place to another.

## The ultimate accomplishment in revolutionary technology.

Under the elegant black glass surface of the Piano, 36 separate inductors are linked together for easy adaptation to all cooking methods, from the most gentle to the most intense. They combine extreme precision with unrivalled power, and provide a 100% zoneless induction cooking space.

## Run your fingers across the Tactilium screen.

Its touch-sensitive interface contains 250,000 colours, providing brightness and contrast which make it easy to read the clear function descriptions provided. Totally interactive, the hob displays the position of pans on the cooking area at all times, as well as the level of power that can be applied with a touch of a finger or by using the slider.

DTIM1000C | ABSOLUTE BLACK

## 90CM PIANO INDUCTION HOB DTIM1000C

The Piano induction hob from De Dietrich is, quite simply, revolutionary. This generous, 100% zoneless space can accommodate up to 5 pans. Let your fingers dance across the Tactilium screen and experience total freedom in your creation with the Solo, Piano and Expert modes. This intelligent hob automatically recognises the pans placed on it and transfers the related settings to their new location as soon as you move them.

THE LEVEL EXPECTED OF  
A TOP QUALITY BRAND

# GLASS AND STAINLESS STEEL GAS HOBS

This collection of De Dietrich gas hobs reflects its commitment to offering excellence in its designs, giving you total control over the energy you use. The highest quality materials are combined with the utmost sophistication, contributing to both the stunning appearance and top-level functionality of De Dietrich appliances.

## *A wide-ranging collection with something for everyone.*

There is something to suit everyone's requirements in the most diverse collection designed by De Dietrich to date, with a wide variety of sizes available. All gas hobs are compatible with each other so that you can create a cooking area that is exactly how you want it.

## *“Flat” gas hobs. Restyled cooking areas.*

The new creations in this collection are outstanding. They have been redesigned to provide maximum comfort and convenience during use. With three or four gas burners arranged in a diamond shape, maximum use can be made of the space, with both small and large pans easily accommodated. The perfectly flat, polished surface comes in Stainless Steel, and can be installed perfectly flush with the work surface. Once the grids and burners are removed it can be wiped clean with a sponge, and will retain its shine for many years to come.

## *Guaranteed performance.*

The gas burners provided with De Dietrich hobs offer various cooking options and a wide range of heat settings. Leaving pans to simmer on the auxiliary burner or searing meats to perfection are just two of the many ways that you can use them, with an even distribution of heat consistently ensured throughout the cooking process.

## *Gas cooking in complete safety across the entire collection.*

A thermocouple safety system is located against each burner, which activates as soon as you touch the controller to ignite it. If necessary, this thermocouple instantly and automatically cuts off the gas supply to prevent any leakages occurring should the flame accidentally be extinguished.

## *Ergonomically-designed knobs.*

All knobs have been specially designed to offer the highest levels of ease and comfort during use. Adjusting the heat of the burners is an easy and accurate process.

GAS HOBS

# EXCEPTIONAL MODULARITY FOR AN INFINITE CULINARY EXPERIENCE

## DOMINO HOBS

The range of domino hobs in the new De Dietrich collection is of pure excellence, with each offering the utmost in sophistication and technical innovation. Combine them to create a cooking space that is both personal and functional.

### *A collection of 38cm domino hobs with a unique design.*

Just like the different instruments of an orchestra. Each one of the elements of the 38cm collection have their own part to play in creating a perfect ensemble. These appliances can be used either on their own or in conjunction with another. The design and dimensions of the 38cm horiZone Induction domino hobs, are a harmonious combination, and will fit beautifully into any set up, in any number of possible arrangements and combinations. They are also available in a classic 30cm size.

### *horiZone, creative innovation from De Dietrich.*

This cooking zone, already one of the largest and most powerful around, adds yet another dimension to the outstanding performance that is expected from an induction hob: freedom. This modular space enables you to work with one or two classic cooking zones at the front and back of the domino, as well as an ample single zone perfectly designed to accommodate large pans and dishes, all whilst guaranteeing a perfectly even distribution of heat.

### *The horiZone Play domino.*

### *Exceptional modularity for an infinite culinary experience.*

Accompanied by a chopping board made with wood from the Sologne region of France, removable grill and plancha accessories are also available for this domino which are perfectly designed to fit seamlessly onto the horiZone zone. A feature for linking cooking appliances, which can then be accessed directly via the programming control panel, allows you space to get creative and let your culinary talents run free.

### *Gas domino hobs. Presenting you with a comprehensive skill set.*

Gleaming glass surfaces that are crowned with single-burner cast-iron grids.

### *A Teppanyaki for healthy cooking or parties.*

Teppanyaki cooking has been firmly embedded in Japanese culture for centuries, and this Teppanyaki enables you to grill prawns, meat, mini fruit skewers or anything else you like without it sticking, and without needing to use fat or oil on the cooking surface.

CONSTANTLY DEVELOPING  
HOODS THAT ARE HIGHER  
PERFORMING, MORE  
INTUITIVE AND QUIETER  
THAN EVER

## HOODS

With decorative hoods for every work surface, the new extraction collection is like nothing you've ever seen before. It has been specially designed by De Dietrich to appeal to exquisite those seeking both functional perfection and visual harmony.

### ***A+ rated box decorative hood. Top-class performance.***

De Dietrich engineers have achieved major technological success in this sophisticated new collection of decorative hoods. Recognised as having an A+ energy rating, they offer the best possible performance both in terms of energy savings and efficiency.

This excellent performance is the result of a design that has been successfully brought to fruition which combines the efficiency of three stainless steel filters with a highly effective motor and LED lighting: two key elements in significantly limiting noise levels and energy consumption.

### ***Work surface hood. For extraction and cooking that are perfectly in tune.***

The height of luxury and sophistication, this evokes emotions that are rarely seen in relation to extraction units. Following initial amazement, its innovative design is met with the greatest admiration. Its uniqueness lies in the way it sits directly next to the hob, showing nothing but a plain flat surface in a subtle, deep black glass.

HOODS

73

### ***Peripheral extraction hoods.***

Inspired by professional kitchens, this method of extraction is extremely effective. Cooking vapors are drawn in through apertures located around the perimeter of the hood. This system also provides a noticeable reduction in noise levels.

### ***Power equalling efficiency.***

A veritable crossroads of the home, nowadays the kitchen is less removed than ever before, with walls being taken down to create open living spaces with dining rooms, living rooms and lounges. With the development of power settings that reach up to 800m³/h, the extraction range brought to you by De Dietrich has become part of this transformation, providing effective and regular air renewal in even the largest of spaces.

### ***ICS technology: hoods that are both intelligent and automatic.***

This ICS hood uses sensors to detect heat and vapour, and turns on automatically as soon as it does. It intelligently adapts its speed of extraction, and turns itself off ten minutes after it detects that the last of the vapours have been extracted.

### ***A carefully thought-out design, and top-quality manufacturing.***

De Dietrich has developed a collection of hoods which combine design aspects, technology and functionality to the same exacting standards. These standards apply throughout the entire life of the unit, from the day they are installed; with a cleverly-designed mounting and adjustment system, an inner housing for ease of maintenance and cleaning, integrated silencers for the quietest operation possible.

### ***LED lighting. The greatest respect for both the environment and your well-being.***

This lighting method stands out as consuming almost 85% less electricity and lasting 20 times as long as an incandescent bulb. The system both efficiently illuminates all the pans on your hob and provides you with soft mood lighting that is ideal for over dinner.

### ***Canopy and telescopic hoods. The utmost discretion.***

The **canopy hood** is installed in place of a wall cabinet above the hob. It is fronted with a decorative door that is matched to other kitchen units and provides easy access to all electronic controls for turning on the extractor or activating the lights when opened.

The **telescopic hood** hides away under a wall cabinet, displaying no outward signs of its functional qualities. Its controls are concealed behind an understated stainless steel front panel - full access is gained by simply pulling it towards you. Its new self-close system ensures smooth and gentle operation.

### ***Unparalleled technological prowess in an exceptional minimalistic housing.***

Design and technology come together in the programming of our extractor hoods. The new collection is testament to this: the elegant glass front and copper-clad controller contribute to the stunning appearance of our new Platinum, Iron Grey and Pure White ovens.

Inspired by the innovations made to our De Dietrich ovens, hobs and dishwashers, various features are now available on many of the hoods in our collection.

#### **Boost function.**

When selected, this feature immediately sets the hood to work at maximum extraction speed for even greater efficiency when large amounts of vapour or cooking aromas are present.

#### **Eolyse® function.**

For use at any time - even when you're not in the kitchen. By activating this function with a simple tap on the touch-sensitive button, Eolyse® silently filters and renews kitchen air in a one-hour process. You can also programme this function to take anywhere between two and nine hours. Depending on your instructions it can - for example - turn itself off at the end of the evening.

#### **Delayed Stop function.**

This system has been designed to totally eradicate any residual post-cooking vapours. The hood continues to function for ten minutes after the last speed is selected, then turns itself off automatically. The delayed stop function is automatically activated on hoods equipped with ICS technology.

#### **Auto-Stop safety feature.**

This precautionary system automatically switches off the extraction or lighting features on the hood after operating for nine hours with no intervention from you.

#### **Saturation indicator for grease and carbon filters.**

In order to ensure the hood works at maximum efficiency, we recommend that grease filters are cleaned and the carbon filter is changed regularly. A warning light illuminates when grease has built up on the filters and they need cleaning or replacing.

# WASHING

- 88 • Dishwashers
- 92 • Fully and Semi-integrated Dishwashers
- 93 • Fully integrated washer-dryer

## DISHWASHERS

There is a dishwasher in the De Dietrich Collection for every occasion. They are created to the very highest standards: elegantly sophisticated, with a clever and spacious interior layout built to accommodate 13 place settings, and equipped with intelligent electronic programming for exceptional performance.

### *Fully and Semi-integrated.*

The 60cm built-in dishwashers are offered with stainless steel panel, and are suitable for installation either under the counter or higher up in a cabinet recess. They come complete with decorative doors which match other units, meaning they blend in perfectly with the rest of your kitchen.

The 60cm full built-in dishwashers vanish into their surroundings. The control panel is located out of sight on the edge of the door.

### *The De Dietrich eco-design.*

For years, De Dietrich has offered products of outstanding quality with environmentally-friendly technology. The Washing Collection is a prime example of this, with models receiving A+++ ratings for electricity consumption (or respective savings of an extra 30% compared to an A-rated model).

### *ICS Technology.*

### *An intelligent dishwasher for optimum consumption.*

This technology makes use of sensors which automatically detect the level of soiling. They accurately analyse the amount of washing, decide on which washing, rinsing and drying cycles to use, and adjust the levels of water and energy consumption required throughout the cycle with the utmost precision, as well as the length of the washing cycle.

DISHWASHERS

*A range of programmes and options tailored to your needs for gleaming efficiency.*

**Intensive:** a programme designed to wash extremely dirty dishes more efficiently, and overcome even the stubbornest of stains on cooking utensils.

#### ECO

**Eco:** this 45°C wash cycle stands out as being the most efficient, in terms of both water and energy consumption.

**Glass:** a cycle suited to washing and drying fragile dishes, especially glasses.

**Soak:** very short detergent-free cycle lasting 15 minutes, for pre-rinsing heavily soiled dishes or wetting them down before a wash scheduled for the next day or the day after.

#### Automatic door opening for drying.

The drying by natural convection is perfected by a feature which automatically opens the door at the end of the cycle, reduce your energy consumption by 20%.

*Touch-sensitive and electronic controls, synonymous with precision.*

Whether located on the front or the edge of the appliance, the control panel is simple and easy to read, for more effective management of the washing process.

#### Delayed Start Function.

Once the appliance is programmed, it can start itself at any time set between 1 hour and 24 hours later.

*Multifunction tablet function.*

Water hardness allowing, the dishwasher can automatically adjust all washing and drying settings in any chosen programme, in order to achieve maximum results with the tablets used.

*An innovative modular layout for accommodating up to 13 place settings.*

**A Mezzanine Space** provides a third rack in 13 place settings models. A range of different loading options for accommodating all different dishes and cooking utensils. The side sections can slide out to create space for long-stemmed glasses, ensuring that they stay safe during the wash cycle and come out gleaming.

*Aquablock: security for total peace of mind.*

Enjoy complete protection with Aquablock, which comprises anti-overspill and anti-leak systems, as well as a system for electrically cutting off the water supply.

# FULLY AND SEMI-INTEGRATED DISHWASHERS

## EMI-INTEGRATED DISHWASHER 13 PLACE SETTINGS DVH1323X

# COOLING

- 96 • Fridges-Freezers
- 98 • Integrated Fridge-Freezer
- 99 • Wine Cellars
- 101 • Integrated Undercounter Single Door
- 102 • American-Style Fridges

## FRIDGES-FREEZERS

With a sophisticated approach to preserving the freshness and flavour of stored food, and eternally generous in providing space to accommodate it, the De Dietrich Cooling systems are available in a range of varieties. Transparent glass converging on the metallic accents of accessories, cleverly equipped space, electronic temperature control, and more. De Dietrich fridges have a rare gift for being able to merge seamlessly into the ideal living space: the kitchen.

### ***A++ rated cooling systems, guaranteeing minimal energy consumption.***

The fridges in the De Dietrich Cooling Collection are extremely energy efficient, as recognised by their A++ rating.

### ***Cold air circulation: guaranteeing optimum preservation.***

The ventilation system provided with certain fridges in the De Dietrich Collection constantly circulates cool air, ensuring an even temperature throughout. Thanks to this system, all dishes are kept in optimum conditions, regardless of the level they are stored on.

### ***Electronics for perfect temperature control.***

Certain models in the range are equipped with an electronic regulator to ensure that food is kept at the optimum temperature. An electronic probe is used to check the temperature, ensuring that the inside of the fridge remains constantly cool. This Super Refrigeration function enables you to bring fresh produce back to temperature after purchase, whilst fully complying with the cold chain.

### ***Lighting** LED LIGHTING*

All products in the integrated Collection offer LED lighting to ensure optimum visibility into the fridge.

### ***Functional and fully-equipped interior.***

**Glass shelving** provides a touch of class: it is completely stable and satisfies all hygiene requirements.

Equipped with numerous **chrome-finished balconies**, the fridge door offers a highly versatile space for storing anything from condiment bottles to gourmet products or jars of jam.

**A chrome arch** is cleverly located under the shelves, providing extra storage space for bottles.

**A removable box** slides out from under the rack which is perfect for storing items such as cheese.

**Freshness compartments** preserve the flavour and nutritional value of fresh foods, enabling you to keep them for up to three times as long.

**The American-style fridge** also includes a "Cool Box" drawer with a regulated temperature of between 0°C and 3°C for better preservation of meat and fish. The freezer has a spacious inner design, and an external dispenser provides cool, clean, filtered water, as well as both ice cubes and crushed ice.

## 60CM OVENS

### Recess A

### Recess B

## INSTALLATION GUIDELINES

### SECURING INTO THE NICHE

This appliance is made to fit into a niche. The measurements of the niche are given with each appliance. The furniture coating along with the glue securing it must be heat-resistant in order to avoid any deterioration. It is compulsory that you respect this installation and secure it in the niche using the screws provided. The securing holes on the sides are accessible when the oven door is open. All simple ovens can be secured either in a tall cabinet or under a kitchen counter top with no specific air vent, unless the oven is built in above a refrigerator. In this event, it is compulsory for both appliances to be separated by a wooden shelf which must not obstruct the minimum 50mm-deep chimney on the whole of the back of the piece of furniture for the refrigerator air vent.

INSTALLATION GUIDELINES

POSSIBILITY OF FLUSH-MOUNTED INSTALLATION

- 1 - Place the cooking hob in the cutout and center.
- 2 - Connect the cooking hob to the power supply.
- 3 - Check the function of the hob.
- 4 - In the remaining slot, inject the seal material in silicone (heat-resistant: minimum 160°C).
- 5 - Follow the sealant manufacturer's instructions for silicone sealing gasket (smoothing).

65CM INDUCTION HOBS

FLUSH-MOUNTED INSTALLATION POSSIBLE

INSTALLATION GUIDELINES

POSSIBILITY OF FLUSH-MOUNTED INSTALLATION

- 1 - Place the cooking hob in the cutout and center.
- 2 - Connect the cooking hob to the power supply.
- 3 - Check the function of the hob.
- 4 - In the remaining slot, inject the seal material in silicone (heat-resistant: minimum 160°C).
- 5 - Follow the sealant manufacturer's instructions for silicone sealing gasket (smoothing).

TECHNICAL SPECIFICATIONS

DIAGRAMS AND INSTALLATION ADVICE

INSTALLATION GUIDELINES

DOWNDRAFT HOODS

Installation is possible with all hobs including gas hobs.

To install inside a cabinet, you must remove the motor, place the hood on top and secure the motor block back. The latter can be placed at the front or at the back of the hood with a horizontal or vertical vent. For a recycling installation, a vent will be required inside the cabinet, under the cabinets, or by making a hole in the side of the cabinet (the vent tube and hooks are not provided). The electronic control unit must be placed in an easily accessible area 10cm from the ground and away from any source of heat. Once installation is complete, the automatic calibration of the hood must be carried out. Finally, for optimal efficiency, the authorised distance between the recess hole for the hood and the counter top is maximum 6cm.

KIT TO REMOVE THE MOTOR

The kit contains:

- ◆ 2 connection flanges diam. 150mm
- ◆ 8 screws and 8 retaining nuts
- ◆ 1 7m-long extension cord to plug in the motor
- ◆ 1 plastic connector, rectangle or round
- ◆ 1 side/lower connector for the tube
- ◆ 1 zinc plated steel sheet for the back
- ◆ 1 2m-long tube for air ventilation

INSTALLATION GUIDELINES

INSTALLATION WITHOUT ROUTING,  
SLIDING FIXING SYSTEM

The appliance should be integrated into a cabinet with a door that has hinges. Assembly of both doors is done by hooking the cabinet door onto the appliance door using the runner(s). Both doors (appliance + cabinet) slide on each other and the hinge system works by using its own hinges on the appliance: the fridge/freezer door with its hinges on the appliance, the cabinet door with hinges on the cabinet.

INSTALLATION WITHOUT ROUTING,  
DOOR ON DOOR FIXING SYSTEM

The appliance should be integrated into a cabinet with a door that has not hinges. Assembly of both doors is done by fixation of the cabinet door onto the appliance door and is fixe. The articulation of the 2 doors (appliance + cabinet) is ensured by the hinges of the refrigerator or freezer.

INSTALLATION GUIDELINES

WATER CONNECTION

Aquastop to order with the appliance.  
Water connection kit supplied with the appliance.  
If the appliance should be placed in a niche, you need a minimum distance of 150mm from any wall unit and also ensure good general ventilation according to these instructions.
